(REVISED 11/15/01)

LETTERS/CARDS MAIL PROCESSING COST MODELS AND FEE COST MODELS

<u>Description</u>	<u>Page Nos.</u>
Introduction	i - iii
First-Class Mail Letters/Cards	1 - 54
Standard Mail Letters	55 - 92
Fees	93 - 104
Weight Averaging MTM Analysis	105 - 112

INTRODUCTION

Library reference USPS LR-J-60 is a category 2 library reference sponsored by witness Miller that contains both hardcopies and electronic copies of the cost studies that support his testimony (USPS-T-22). These cost studies include: First-Class Mail letters/cards, Standard Mail letters, Qualified Business Reply Mail (QBRM) letters/cards, First-Class Mail nonstandard surcharge, First-Class Mail and Standard Mail nonautomation presort letters nonmachinable surcharge, and Special Services fees. In addition, this library reference contains a Methods Time Measurement (MTM) analysis for weight averaging letters.

A. FIRST-CLASS MAIL LETTERS/CARDS

This cost study is contained in the EXCEL file FCMREV2.XLS. (The figures were revised on 11/05/01 as described below.) It contains the cost models and cost sheets that are used to develop First-Class Mail total mail processing unit cost estimates and worksharing related savings estimates by rate category for both letters and cards. The results from this study are relied upon by witness Eggleston (USPS-T-25) and witness Robinson (USPS-T-29). The calculations and data inputs used to develop these models are discussed in the testimony of witness Miller (USPS-T-22).

B. STANDARD MAIL LETTERS

This cost study is contained in the EXCEL file STDREV.XLS. It contains the cost models and cost sheets that are used to develop Standard Mail total mail processing unit cost estimates and worksharing related savings estimates by rate category for letters. The results from this study are relied upon by witness Eggleston (USPS-T-25), witness Moeller (USPS-T-32), and witness Taufique (USPS-T-34). The calculations and data inputs used to develop these models are discussed in the testimony of witness Miller (USPS-T-22).

C. QUALIFIED BUSINESS REPLY MAIL (QBRM) LETTERS/CARDS

This cost study uses the same cost models and data inputs as those used for the First-Class Mail letters/cards cost studies. As such, it is also included in the EXCEL file FCMREV2.XLS. This cost study calculates the worksharing related savings estimate for QBRM letters and cards. The results from this analysis are relied upon by witness

Robinson (USPS-T-29). The calculations and data inputs used to develop this cost study are discussed in the testimony of witness Miller (USPS-T-22).

D. FIRST-CLASS MAIL NONSTANDARD SURCHARGE

The First-Class Mail nonstandard surcharge cost study is also found in the EXCEL file FCMREV2.XLS. It contains the additional cost estimates required to process nonstandard First-Class Mail single-piece and presort mail pieces. The results from this analysis are relied upon by witness Robinson (USPS-T-29). The calculations and data inputs used to develop this cost study are discussed in the testimony of witness Miller (USPS-T-22).

E. FIRST-CLASS MAIL AND STANDARD MAIL NONAUTOMATION PRESORT LETTERS NONMACHINABLE SURCHARGE

The First-Class Mail and Standard Mail nonautomation presort letters nonmachinable surcharge cost studies are found in the EXCEL files FCMREV2.XLS and STDREV.XLS, respectively. These cost studies calculate the additional costs required to process nonautomation presort letters that must be processed manually. The results from this analysis are relied upon by witness Robinson (USPS-T-32) and Moeller (USPS-T-32). The calculations and data inputs used to develop this cost study are discussed in the testimony of witness Miller (USPS-T-22).

F. SPECIAL SERVICES FEES

The cost studies for the following Special Services fees are found in the EXCEL file FEES.XLS: annual permit fee, annual accounting fee, QBRM quarterly fee, non-letter size BRM monthly fee, high volume QBRM per-piece fee, basic QBRM per-piece fee, high volume BRM per-piece fee, basic BRM per-piece fee, and non-letter size BRM per-piece fee. The results from these cost studies are relied upon by witness Mayo (USPS-T-36). The calculations and data inputs used to develop this cost study are discussed in the testimony of witness Miller (USPS-T-22).

G. WEIGHT AVERAGING MTM ANALYSIS

The Methods Time Measurement (MTM) analysis that calculates a productivity for weight averaging letters can be found in the EXCEL file WTAVG.XLS. This productivity supports the BRM per-piece fee analyses.

H. 11/05/01 REVISIONS

On November 5th, 2001, several revisions were filed. These revisions are described below and only affect the letters and cards cost models found in the FCMREV2.XLS workbook.

1. Automation Presort Letters Mail Processing Unit Costs

The automation presort letters mail processing unit costs on page 8 were not consistent with those found in USPS LR-J-53. Consequently, the correct figures have been added. This change subsequently affected pages 1, 4, and 7.

2. Automation Presort Cards Mail Processing Unit Costs

The automation presort cards mail processing unit costs on page 9 were not consistent with those found in USPS LR-J-53. Consequently, the correct figures have been added. This change subsequently affected pages 2, 5, and 7.

3. Nonautomation Presort DPS Percentages

The Delivery Point Sequencing (DPS) percentages from the nonautomation presort letters cost models have been included on page 3. In addition, the cumulative value for all nonautomation presort letters has been calculated to support the response to MMA/USPS-T22-19(B).

4. Qualified Business Reply Mail (QBRM) Letters/Cards

The QBRM cost study has been revised based on issues that surfaced in responding to MMA/USPS-T22-25. These revisions affected pages 10, 11, 12, 13, and 14.

5. Bulk Metered Mail (BMM) Letters Cost Model

The title on page 15 has been changed from "First-Class Mail Single-Piece Metered Letters" to "First-Class Mail Bulk Metered Mail (BMM) Letters." The spreadsheet tab for page 15 has also been changed from "METER COSTS" to "BMM LETTERS COSTS."

The title on page 16 has been changed from "First-Class Mail Single-Piece Metered Letters" to "First-Class Mail Bulk Metered Mail (BMM) Letters." The spreadsheet tab for page 16 has also been changed from "METER MODEL" to "BMM LETTERS MODEL."

I. 11/15/01 REVISIONS

On November 15th, 2001, several revisions were filed. These revisions are described below and affect the First-Class Mail letters and cards cost models found in the FCMREV2.XLS workbook and the Standard Mail letters cost models found in the STDREV.XLS workbook. The figures that changed have been shaded in gray in USPS LR-J-60.

1. Bulk Metered Mail Letters Model Costs

The Bulk Metered Mail (BMM) letters mail flow model contained an error that occurred in all instances where mail pieces had to be processed through the Remote Bar Coding System (excluding the handwritten mail flow model, which had to be dealt with separately). The portion of the mail that was accepted by the Multi Line Optical Character Reader Input Sub System (MLOCR-ISS), but was not barcoded, needed to be routed to the Output Sub System (OSS). Consequently, the MLOCR-ISS accept rate was added to pages 51 and 88. The difference between the combined MLOCR-ISS/Remote Computer Read (RCR) finalization rate and the MLOCR-ISS accept rate was used to estimate the volume of mail to be routed to the OSS. This change affected the mail flows on page 16 and the subsequent costs calculated on page 15. In addition, the BMM letters CRA adjustments factor also changed which affected the QBRM analysis found on page 10 and the nonstandard cost models found on pages 41 and 43. The nonstandard cost models, in turn, affected the nonstandard surcharge estimate calculated on page 45.

2. Nonautomation Presort Letters and Cards Model Costs

Two revisions were made to the models. Both revisions affected the total mail processing unit cost estimates calculated on pages 3 and 57, as well as the worksharing related savings estimates calculated on pages 1 and 55. In addition, these changes affected the nonmachinable surcharge estimates calculated on pages 6 and 50.

First, the nonautomation machinable mail flow models found on pages 18, 20, 62, and 64 contained the same error that was contained in the BMM letters mail flow model. The mail flows changed slightly affecting the respective costs sheets found on pages 17, 19, 61, and 63.

Second, the nonautomation nonmachinable package sorting costs that were calculated on pages 54, 91, and 92 were calculated based on tray presort level rather than package presort level and were not disaggregated to the proper level. These issues have been resolved.

3. Delivery Unit Costs

As a result of the changes described above, the percent of mail sorted in Delivery Point Sequence (DPS) in the nonautomation machinable letters cost models changed slightly. These percentages subsequently affected some delivery unit cost estimates. The revised delivery unit costs, in turn, affected the worksharing related savings estimates found on pages 1 and 55.

4. Qualified Business Reply Mail (QBRM) Letters/Cards

The handwritten mail flow model on page 12 contained an error. Handwritten mail pieces have their images lifted on the Advanced Facer Canceler System Input Sub System (AFCS-ISS). The handwritten reply mail images are routed directly to the RCR system. Consequently, the usage of the combined MLOCR-ISS/RCR rate was not appropriate. A per-piece RCR cost was calculated on the cost sheet on page 11 and applied to the volume that flowed through that operation in the revised mail flow model on page 12. Given that the handwritten reply mail letter costs changed, the QBRM worksharing related savings estimate found on page 10 also changed.

4. Nonstandard Surcharge

The error that was discussed above in the BMM letters mail flow model also affected the nonstandard single-piece letter and nonstandard presort letter mail flow models found on pages 42 and 44, respectively. The mail volumes flowing through those models changed, which affected the costs found on pages 41 and 43. These cost estimates, in turn, affected the nonstandard surcharge estimate found on page 45.

5. First-Class Mail Single-Piece Machinable and Nonmachinable Cost Models

Cost models were added to pages 40A, 40B, 40C, and 40D to estimate the difference between a machinable single-piece letter (machine printed address) and a nonmachinable single-piece letter as discussed in response to Presiding Officer's Information Request (POIR) No. 4, Question 9a.
