Docket No. R2001-1

PRC LIBRARY REFERENCE 10 – STANDARD MAIL

PRC LIBRARY REFERENCE 10 – STANDARD MAIL

This library reference contains six files listed below.

(1) Regular.xls
(2) Nonprofit.xls
(3) ECR.xls
(4) NPECR.xls
(5) Regular80.xls
(6) Regular100.xls

The first four files are the rate design electronic spreadsheets submitted by Postal Service witnesses Moeller and Hope. These spreadsheets were only used to compute the TYAR revenues resulting from the settlement rates. The last two files use witness Moeller's electronic spreadsheets to compute the Regular subclass TYAR revenues that result from using APWU witness Riley's suggested First-Class passthroughs of 80 percent and 100 percent of presort/automaton cost savings. There is a cross-elasticity effect with Standard mail volumes. Thus, the latter files compute the revenues using the settlement rates for Regular subclass and the volumes that result from using alternative First-Class rates.
