

BEFORE THE
POSTAL RATE COMMISSION
WASHINGTON, D.C. 20268-0001

POSTAL RATE AND FEE CHANGES
PURSUANT TO PUBLIC LAW 108-18

Docket No. R2005-1

RESPONSE OF THE UNITED STATES POSTAL SERVICE TO
PRESIDING OFFICER'S INFORMATION REQUEST NO. 8
(July 1, 2005)

The United States Postal Service hereby provides the responses to
Presiding Officer's Information Request (POIR) No. 8, issued June 17, 2005.
The following witnesses are sponsoring the identified responses to this POIR:

Witness Bradley: Questions 1, 2(c)-(f), and 3

Witness Kelley: Questions 4, 5, 6, 7, 8, 9, and 14

Witness Pafford: Question 16

Witness Stevens: Questions 2(a)-(b) and 10

Witness Taufique: Questions 12, 13, and 17

Institutional Response: Questions 11 and 15

Each question is stated verbatim and is followed by the response.

Respectfully submitted,

UNITED STATES POSTAL SERVICE

By its attorneys:

Daniel J. Foucheaux, Jr.
Chief Counsel, Ratemaking

Keith E. Weidner

475 L'Enfant Plaza West, S.W.
Washington, D.C. 20260-1134
(202) 268-6252; Fax -3084

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

1. Please provide an Excel version of the SAS file that contains the set of ZIP Codes that were ultimately used by witness Bradley to estimate his regular delivery variability model.
 - a. Please list the ZIP codes contained in this file.
 - b. Using those ZIP Codes, please fill in the table below.

ZIP	Maximum # Routes	Minimum # Routes Observed	Daily Percent of Max Routes Observed (Averaged)	Total Days Observed	Days < Than Max Obs	Minimum # Routes Used	Daily Percent of Max Routes Used (Averaged)
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)

For each ZIP:

Column 1 should show the encrypted ZIP Code.

Column 2 should show the maximum possible number of routes that could have been observed on any day within the sample period.

Column 3 should show the minimum number of routes for which observations were recorded on any day within the sample period.

Column 4 should show the daily routes for which observations were recorded as a percentage of maximum possible routes averaged over all of the days in the sample period, for which some data were recorded.

Column 5 should show the number of days for which observations were recorded.

Column 6 should show the number of observed days on which less than the maximum possible number of routes were observed.

Column 7 should show the minimum number of routes for which observations were actually used for modeling purposes, recorded on each day within the sample period.

Column 8 should show the daily routes actually used for modeling purposes as a percent of maximum possible routes averaged over all of the days in the sample period.

RESPONSE:

The data set, in Excel format is attached as

“POIR.8.Q.1.Reggression.Data.Set.xls”.

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

a. The requested listing is provided below:

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

b. The requested file is attached as “POIR.8.Q.1b.Table.xls”. Please note that to assist the Commission in its evaluation of the data, the table has been augmented to provide additional information. First, please note that three separate data sets were collected and constructed in the CCSTS: a time data set, a letter/flat volume data set and a parcel/accountable data set. Thus, the attached file provides the requested “Minimum # of Routes Observed” for each of the three data sets. This is useful information because it illustrates that the primary source of attrition was in the time data, not in the volume data. (This is highlighted in the table presented below which includes the average values across all Zip Codes).

Similarly, the requested “Daily Percent of Max Routes Observed (Averaged)” is also provided separately for each of the three data sets, as are the requested “Total Days Observed,” and “Days < Max Obs.” Finally, review of the requested data revealed that there were instances of “Days < Max Obs.” which conveyed different amounts of information. For example, suppose that a Zip Code has 25 routes. If there were missing data for 20 routes that would be a day with less than maximum observations. However, if there were missing data for just 1 route, that too would be a day with less than maximum observations. It seems reasonable that these two circumstances differ in the implications for missing data. Thus, in addition to the requested column, I also provided a column entitled “Days with 90% of Max Obs.” This column provides information

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

on the number of days in which less than 90% of the maximum routes provided data.

Average Values Across All Zip Codes

Daily Percent of Max Routes Observed (Avg) Time Data Set	Daily Percent of Max Routes Observed (Avg) L/F Data Set	Daily Percent of Max Routes Observed (Avg) P/A Data Set	Daily Percent of Max Routes Used
89.7%	99.7%	96.1%	87.1%

In reviewing the numbers in the table, please note the following issues. First, the values in the column entitled “Maximum Number of Routes” came from the Postal Service AMS “frame” which identifies the number of letter routes in each Zip Code. For a small number of Zip Codes, the minimum number of reported routes from any of the three data sets exceeded the number of routes reported on the frame. Those Zip Codes are listed below.

Zip	Amount by Which Minimum Number of Routes on Any Data Set Exceeded the Frame # of Routes
8937811	12
2958650	7
6395033	2
207119	1
1631973	1
2381912	1
3347202	1
5050753	1
6146537	1
7253903	1
7408660	1
7595552	1
9797599	1

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

In all but two cases, the discrepancies were small and suggest that either a route could have been added in the Zip Code or data on a non-letter route was reported. For the Zip Codes in which there were materially more routes reported in the data than on the frame, a review of the reported data shows that very high numbers of routes were reported for only one of the three data sets, and the other two data sets reported numbers of routes at or slightly below the frame. Also, the excess routes in the "outlier" data set had very high route numbers compared the remaining reported routes. This suggests that these reported routes were not regular letter routes. For all cases, the percentage of daily max routes observed was capped at 100 percent so as not to overstate the average value calculated for column 4.

Next, please note that the total number of days reporting data in column 5 excludes Sundays and holidays reported (virtually all of which reported zero volumes) for the volume data sets to avoid over-representing the amount of data received.

Finally, a comparison of column 7, the minimum routes used (in the regression analysis data set creation) with the minimum routes reported on any day for any of the three data sets shows that for almost all of the Zip Codes, the number of days used was less than or equal to the minimum routes reported on any day for any of the three data sets. However for seven Zip Codes the minimum number of days used in the regression exceeded the minimum routes reported on any

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 1

day for any of the three data sets. Investigation of the data for those Zip Codes shows that this occurred for two reasons. First, for four of the Zip Codes, extra days (with relatively few routes) were reported on one of the three data sets. These extra days had no corresponding data on the other data sets, so no matches could be made between time and volume and these days could not be used in creating the regression data set. For example, Zip Codes 9272079 and 275455 reported 17 days of parcel/accountable data while reporting only 11 days of time and letter/flat data. The other reason (for the three remaining Zip Codes) that the minimum number of days used in the regression exceeded the minimum routes reported on any day for any of the three data sets was that the day on which the minimum occurred for one of the three data sets was not used in the regression. For example, because of matching problems, Zip Code 2432303 had only 9 useable Zip Days rather than 11. Thus, the day with the lowest reporting routes on the time data set was not used in the regression data base.

RESPONSE OF POSTAL SERVICE WITNESS STEVENS
TO POIR NO. 8, QUESTION 2(a)-(b)

2.
 - a. For the response to question 1, please explain the various reasons for attrition of the maximum number of possible ZIP/route/day observations to the number of recorded observations. For example, were observations not recorded because the carrier was not sufficiently trained to make the desired scans? Were observations not recorded because scanned route identifiers were different from those assigned to a given ZIP? Are there other reasons that fewer than the maximum number of possible observations were recorded?
 - b. Of the various reasons listed in response to "a.", indicate to the extent feasible the relative frequency at which they occurred?

RESPONSE:

a. The spreadsheet attached to the response to Question 1 shows that the primary reason for attrition is a lack of reported scan data. After the data were collected, the Postal Service recognized this pattern of attrition and contacted the Zip Codes for which the reported number of routes scanned per day was regularly less than the expected number of routes scanned per day. The following table shows a tabulation of the results. It is difficult to attach a specific frequency to each of the causes to, but the table shows the reasons that the field units reported for not supplying all of the requested data.

Responses as to why less than maximum route scan data was reported each day	Number of Responses
Employees and management were instructed of the correct procedures. There should be no problem	7
We had no way to verify scans made by the carriers.	5
Route(s) was covered by a substitute/pivots.	12
Route had a split.	7
The carrier probably didn't understand the procedures.	3
Corporate database (frame) is incorrect.	2
Unexplained/did not know.	5
Problem with the scanners.	1
Problem with the download/cradles.	3

RESPONSE OF POSTAL SERVICE WITNESS STEVENS
TO POIR NO. 8, QUESTION 2(a)-(b)

Carriers were properly instructed and were performing the scans each day. There should be no problem	4
No daily feedback from HQ on status or scans. Unable to explain	7
Route inspections were performed during this time.	7
All routes show scans from my office.	2
Scanner might have been set up incorrectly by the user.	5
Carrier refused to participate in the study.	1
Count sheets were completed daily for each route and turned in at the end of each week.	2
All routes should show scans. Unaware of any problems.	19
Several carriers were on FMLA, A/L, S/L(long term).	2
Carrier errors.	5
We did not have proper route identifier bar code scans.	1
Mandated to leave 3 to 4 routes open due to low mail volume.	1
Bar scans did not work on the first day, replacements received 3-4 days later.	1
Inadequate training by the supervisor.	1
Carriers were not in compliance.	2

b. Attrition occurred essentially because of two reasons, missing time scan data and missing parcel/accountable volume data. As the spreadsheet provided in response to POIR #8 Question 1 shows, virtually all route days were matched with provided letter/flat volume data. The average daily percentage of reported routes for the time scan data set is 9.7 percent less than the maximum routes reported. The average daily percentage for the parcel/accountable volume data set is 3.3 percent less than the maximum routes reported. When these two attrition rates are combined, this leads to an average daily percentage attrition of 12.9 percent. Decomposing the average daily attrition into its parts suggests that 75 percent of the attrition comes from missing time data route days and 25 percent of the attrition comes from missing parcel/accountable route days. The combined attrition rate is also close to the average daily percentage attrition for

RESPONSE OF POSTAL SERVICE WITNESS STEVENS
TO POIR NO. 8, QUESTION 2(a)-(b)

the analysis data set, suggesting that most of the attrition in the analysis data set comes from missing data, not elimination of observed data points.

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 2(c)-(f)

2.
 - c. Please explain the various reasons for attrition of the number of recorded ZIP/route/day observations to the number of observations used for modeling. Were recorded observations not used for modeling purposes because they were judged improbable, e.g., had time recorded without associated volume, or volume recorded without associated time? Were recorded observations not used for modeling purposes because they were judged to be outliers (unreasonably small or large)? Are there other reasons that not all recorded observations were used?
 - d. Of the various reasons listed in response to “c.”, indicate to the extent feasible the relative frequency at which they occurred?
 - e. If ZIP/route/day observations were not used because a route identifier scanned was inconsistent with the route identifiers in the DOIS database, please explain the various ways in which such a mismatch could occur.
 - f. For the various reasons listed in response to “e.”, indicate to the extent feasible the relative frequency at which they occurred?

RESPONSE:

c. The attrition in forming the analysis data base was due to mismatches between the route days reported for the letter/flat data and the route days reported for the other two data sets. This mismatch is another way reflecting the attrition between possible route days and recorded route days. If a route day has recorded letter and flat volumes but no time data, then this will show up as a “mismatch” in producing the analysis data set. Analysis of the mismatches shows that relatively few mismatches occurred because a route number occurred in one data set but not another. More common was the outcome that routes did not provide complete data for all days for either the scan data or the parcel/accountable data.

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 2(c)-(f)

d. If one takes the letter/flat route days as the set of maximum observable observations, the attrition of route days in constructing the analysis data set came about because either route days on the time data set were missing, route days on the parcel/accountable data set were missing or both. Approximately 60 percent of those mismatches were for missing time data, about 24 percent of the mismatches were because of missing parcel/accountable and in about 16 percent of the mismatches both time data and parcel/accountable data were missing. Allocating the 16 percent joint attrition back to the time data set and parcel/accountable data set in proportion to their own attritions, yields 71 percent of the attrition due to missing time data and 29 percent of the attrition due to missing parcel/accountable data.

e. This mismatch would occur because a route number was not recorded in the scan data set, because an alphanumeric route number was recorded on the scanner or because the recorded route number did not match those in the letter/flat data set (which approximates the route numbers in DOIS). In this last set, the recorded route number was often greater than the number of letter routes in the Zip Code either indicating an error in entering the route number or that it was a special purpose route.

f. Of the route numbers on the time data set that did not match the letter/flat data set, approximately 26 percent had no recorded route number, approximately 9 percent had an alphanumeric route number and 65 percent had an otherwise non-matching route number.

RESPONSE OF POSTAL SERVICE WITNESS BRADLEY
TO POIR NO. 8, QUESTION 3

3. Please provide the PC version of the SAS programs used for each of the models and calculations referred to in sections F and G of USPS-T-14.

RESPONSE:

The programs are provided in the attached file entitled

“POIR.8.Q.3.Programs.Zip.”

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 4

4. Please provide the coefficient of variation for each volume variable for the data set witness Bradley utilized to make his regular delivery variability estimates in USPS T-14.

RESPONSE:

The table below contains the coefficients of variation (cv) – defined as a ratio of the standard error of the mean divided by the mean – that are consistent with the volumes used to calculate witness Bradley’s (USPS-T-14) regular delivery variability estimates.

Volume Variable	Sample Size=n	Standard Deviation=s	Mean=\bar{x}	CV%=$\frac{s/\sqrt{n}}{\bar{x}} \times 100$
Letters	1,545	26,665	36,008	1.9%
Flats	1,545	9,985	11,799	2.2%
Sequenced	1,545	6,333	3,528	4.6%
SPR	1,545	326	373	2.2%
Collection Volume	1,545	6,976	4,969	3.6%

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 5

5. Witness Kelley (USPS-T-16) states on page 8, lines 16-17 of his testimony, that “[t]he objective for this sample was to estimate the vast majority of variables of interest with a coefficient of variation of less than ten percent.” Please discuss whether there were specific variables of interest that were considered more important than the others relative to the need to achieve a desired level of precision.

RESPONSE:

Yes. It was extremely important that the estimates of the major time pools – delivery, travel, and support, met the precision targets that were identified in the sample design process. The aggregate of those three variables encompassed more than 90 percent of the street time activities collected as part of the CCSTS and each of those estimated proportions had a coefficient of variation (CV) of less than five percent. Please refer to OCA/USPS-T16-7 for the estimated CV's of those time proportions. However, I also recognized that variables which occur with a low frequency are extremely expensive to estimate with a low CV so it was deemed acceptable, not ideal, if some estimated low frequency street time proportions did not meet our initial precision targets.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 6

6. Witness Kelley implies on page 9, lines 11 and 12 of USPS-T-16, that the measure of size used to define the strata for the CCSTS was the number of city letter routes within a particular Zip Code. Please identify what measure of size was used to determine the stratum weights for estimates derived from the survey.

RESPONSE:

The stratum weights were based on the ratio of the total number of ZIP Codes in the frame to the number of ZIP Codes sampled. It might be easier to understand this with the notation and equation listed below:

h stratum

(stratum 1 \leq 10 routes, 10 routes $<$ stratum 2 $<$ 61 routes, stratum 3 $>$ 60 routes)

N number of ZIP Codes with city letter routes at the time the sampled was selected

n number of sampled ZIP Codes

$$w_h = \frac{N_h}{n_h}$$

The resulting weights were 214.6, 44.2, and 4.8 for strata 1, 2, and 3 (as defined above) respectively. The final weight for a sampled ZIP Code was determined based on the number of city letter routes the sampled ZIP Code had at the time the data was collected, not the time at which the sample was selected. For example, if a ZIP Code was selected in stratum 3 and had more than 60 city letter routes at the time the data was collected, the weight applied to that ZIP Code in deriving the street time percentages was 4.8 (weight for stratum 3). However, if the same sampled ZIP Code had between 11 and 60 city letter routes at the time the data was collected, regardless of fact that it was in stratum

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 6

3 when it was originally selected, then the final weight used to derive the street time percentages for that ZIP was 44.2 (weight for stratum 2 as defined above).

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 7

7. Witness Kelley describes on pages 12 and 14 of USPS-T-16, the reductions made in the CCSTS sample size. How did he account for these reductions in the variance estimation? Please provide a general expression for the estimator of the resultant variance.

RESPONSE:

The weights derived in my response to POIR No. 8 Item 6. were used to estimate the sampling errors of the street time proportions. Below are the formulas¹ used to derive the street time percentages and the sampling errors on those proportions. The final estimates of the street time percentages are at the ZIP-route-day level.

Notation

y variable of interest

x total street time

^ estimate

w weight (please refer to my response to POIR No 8. Item 6 for its derivation)

h stratum

i ZIP Code

j city letter route

k day

n sample size (ZIP route days)

f sampling fraction $\frac{n}{N}$

N $w \times n$

¹ Cochran, William, G. Sampling Techniques 3rd Edition. (John Wiley & Sons, 1977). pp 153-155.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 7

- R ratio
- \hat{Y} estimate of total for variable of interest
- \hat{X} estimate of total for total street time
- V variance
- s sample standard deviation
- s_{xy} covariance between x and y

Estimators

$$\bar{x}_h = \frac{\sum_{i=1}^{n_h} \sum_j \sum_k x_{hijk}}{n_h}$$

$$\hat{Y}_h = \frac{N_h}{n_h} \sum_{i=1}^{n_h} \sum_j \sum_k y_{ijk} \rightarrow \hat{Y} = \sum_{h=1}^3 \hat{Y}_h$$

$$\hat{X}_h = \frac{N_h}{n_h} \sum_{i=1}^{n_h} \sum_j \sum_k x_{ijk} \rightarrow \hat{X} = \sum_{h=1}^3 \hat{X}_h$$

$$\hat{R}_y = \frac{\hat{Y}}{\hat{X}}$$

$$V(\hat{R}_y) = \sum_{h=1}^3 \frac{(1-f_h)}{n_h \bar{x}_h^2} (s_{hy}^2 + \hat{R}_y^2 s_{hx}^2 - 2\hat{R}_y s_{hxy})$$

$$CV(\hat{R}_y) = \frac{\sqrt{V(\hat{R}_y)}}{\hat{R}_y}$$

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 8

8. Witness Kelley (USPS-T-16) concludes on page 14, lines 1-5 of his testimony, that it was extremely unlikely that the estimates from the city carrier study "...would not meet the original precision objective of a relative error of less than ten percent." He also states on page 14, line 1, that "...there was a sizable gap between the expected accuracy from a final sample of one-hundred and sixty-seven Zip Codes and the initial targeted level of precision...."
- a. Please identify the initial targeted level of precision.
 - b. What was the expected accuracy from the sample of 167 Zip Codes, and how was it determined?
 - c. The comparison of accuracy with precision suggests a comparison of mean squared error or total error with variance. Was a comparison of this type made?

RESPONSE:

- a. The initial targeted level of precision was a coefficient of variation of ten percent for most of the variables being estimated from the survey.
- b. I regret the confusion caused as a result of using the words precision and accuracy in the manner in which I did in my direct testimony. In my testimony, I used the word accuracy as a synonym for precision. My intention was to illustrate that the estimated coefficients of variation on the street time percentages were considerably lower than the target of ten percent. Please refer to OCA/USPS-T-16-7 for the estimated coefficients of variation on the estimated street time proportions.
- c. No. Please refer to my response to part b.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 9

9. Please refer to the spreadsheet entitled “oca.1.4.7 attach,” provided in Response of Postal Service Witness Kelley to Interrogatories of the OCA (OCA/USPS-T-16-1-7).
- a. Please confirm whether cell C3 in worksheet oca.7, should have a value of 44.208 rather than 44,208.
 - b. If so, please revise each of the above-mentioned spreadsheets to the extent they are affected by this change.
 - c. Please identify the formula and data used to make the calculations in column D of worksheets oca.1, oca.4, and oca.7, and column C of worksheet oca.7.
 - d. Please provide the formula by which sample size was calculated in worksheets oca.1 and oca.4 in the above-mentioned spreadsheet and either provide the data, along with a brief description of its nature, or identify the cells that contain the data necessary to determine sample size in each worksheet.
 - e. Please refer to cell M32 of worksheet oca.7 in the above-mentioned spreadsheet. This cell calculates a coefficient of variation for parcels/accountables, deviation delivery, and travel time in aggregate.
 - i. Please provide the coefficients of variation for each of these items separately.
 - ii. Please also provide the coefficients of variation for the non-street time, and prep time cost pools.

RESPONSE:

- a. Confirmed that there was a typo in the referenced cell, but the value in that cell was not pulled into any other cells used to calculate the cv's.
- b. Since the corrections did not involve formulas used in other cells, the change had no impact on the results of worksheet oca.7. Please refer to my response to POIR No. 8 Item 7 for an explanation of the formulas used to derive the values calculated in worksheet oca.7.
- c. Column D in worksheet oca.1 was the final number of ZIP Codes selected by stratum. The sample sizes were finalized as a result of a sample reduction process and were not the result of a specific mathematical formula. An

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 9

explanation of the process by which I arrived at those final sample sizes by stratum was explained in my direct testimony starting on page 11 line 15.

The sample sizes in rows two and three (third stratum was a certainty stratum at this time) of Column D in worksheet oca.4 are the result of applying the formula for Neyman² allocation, $n_h = n \left(\frac{N_h S_h}{\sum_h N_h S_h} \right)$, to FY2000 CCCS (City Carrier Cost System) volume data. However, the standard deviations (column G) and population sizes (column B) given in oca.1 and oca.4 are based on FY2001 CCCS data. This explains why the sample sizes derived by applying the formula for Neyman allocation to the data in oca.4 are not equal to the ones in column D of oca.4. Applying the formula to the data in oca.4 derives stratum sample sizes of 35 for stratum one and 138 for stratum 2 as compared with the sample sizes based on FY2000 data which were 33 for stratum 1 and 140 for stratum 2 as indicated in column D. Unfortunately, the FY2000 data has been lost and cannot be recovered, so I am unable to display the values that were used to derive the sample sizes in Column D of oca.4.

Column D of oca.7 is the number of ZIP-route-days that were used to derive the street time proportions from the CCSTS. Column C of worksheet oca.7 represent the stratum weights used in calculating the estimated street time proportions. Please refer to my response to POIR No. 8 Item 6 for an explanation of the manner in which these weights were calculated.

d. Please refer to my response to part c.

² Cochran, William, G. Sampling Techniques 3rd Edition, (John Wiley & Sons, 1977), pp 98-99.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 9

- e. (i) and (ii). Please refer to the attached worksheet for the requested estimates.

RESPONSE OF POSTAL SERVICE WITNESS STEVENS
TO POIR NO. 8, QUESTION 10

- 10.** Attachment 3 of witness Stevens' testimony (USPS-T-15) indicates that over 9 percent of total scan time was invalid. Please discuss any attempts made to assess the effects of omitted, invalid, or out of sequence scans on carrier street time variability.

RESPONSE:

The Postal Service first considered whether the invalid scans constituted a specific pattern. Please refer to ADVO/USPS T15 –5, where the 10 most common invalid sequences are presented. Given the large variation in the invalid sequences, it was concluded that no pattern existed. Secondly, the Postal Service investigated whether there was a pattern to the ZIPs at which the invalid sequences occurred. This investigation revealed no systemic patterns. The Postal Service then considered using the information (the first and second scans) in the invalid scans to allocate the scans to existing time pools and its effect on the analysis. The effort was determined to be extremely burdensome with minimum effect on the final time pools given the diverse distribution of invalid scan pairs; consequently it was not attempted.

RESPONSE OF THE UNITED STATES POSTAL SERVICE
TO POIR NO. 8, QUESTION 11

11. Please refer to the document Notice of United States Postal Service of Replacement of Witness Moser, filed on May 20, 2005. The document states that witness Moser is withdrawing from the case and that her testimony will be divided between several other witnesses. The document states that witness Hatcher will incorporate numerous sections of witness Moser's testimony into her testimony, one of which is section XI (Periodicals Applications). However, in witness Hatcher's revised testimony filed on June 8, 2005 there is no mention or coverage of Periodicals Applications. Please explain when this topic will be covered and which witness will be covering it.

RESPONSE:

Costs for Periodicals applications are covered by witness Page. See Notice of United States Postal Service of Filing of Revised Testimony of Witness Page (USPS-T-23), filed June 22, 2005.

RESPONSE OF POSTAL SERVICE WITNESS TAUFIQUE
TO POIR NO. 8, QUESTION 12

12. Please refer to USPS-LR-K-115, USPS-T-28C spreadsheets, to the sheet entitled "SS-26 Permit Imprint Per." In C3 there is a number showing the proportion of transactions at the "old" fee (which is inferred to be \$125 in the calculations) and the "new" fee (which is inferred to be \$150 in the calculations). In cell C17, the FY 2004 fee is listed as 129.7554348, derived from the above-mentioned figures. Were there two different fees being charged for this service in 2004? Since the base year fee is listed as \$150, why does this sheet show that \$125 was charged close to 81% of the time?

RESPONSE:

The FY 2004 fee of \$129.7554348 listed in cell C17 is incorrect. There was only one fee charged for this service in FY 2004, and that fee is \$150. The old fee and new fee references are to FY 2002, when there were two fees charged for the service, but these references should not have been in this workpaper.

The fee should have been \$150, not \$129.7554348. Consequently, the Base Year and Test Year volumes should all be 41,758 (not 48,273). The Test Year Before Rates revenue should be \$6,263,713 (not \$7,240,983) and the Test Year After Rates revenue should be \$6,681,294 (not \$7,723,715).

RESPONSE OF POSTAL SERVICE WITNESS TAUFIQUE
TO POIR NO. 8, QUESTION 13

13. The record reflects three different figures for Periodicals Within County revenue. Witness Robinson's Exhibit 27B (revised 6/10/05) shows Periodicals Within County revenue of \$69,044,800. Witness Taufique's USPS-T-28A spreadsheet in USPS-LR-K-115 (revised 6/07/05) shows Within County postage revenue of \$69,043,612 (worksheet "2006 AR"). Taufique's USPS-T-28B spreadsheet in USPS-LR-K-115 (revised 6/07/05) shows Within County postage revenue of \$67,324,612 (worksheet "WC-6 Test Year 2006 AR"). Taufique's USPS-T-28C spreadsheet in USPS-LR-K-115 (Revised 6/07/05) shows Within County fees of \$1,720,489. The sum of the revenue in USPS-T-28B and fees in USPS-T-28C is \$69,045,101. Please reconcile the differences among these three revenue amounts and show the derivation of the correct amount.

RESPONSE:

The correct revenue figure for Within County Periodicals is \$69,045,101, derived by summing the Within County postage revenue of \$67,324,612 with the Within County fees revenue of \$1,720,489. A spreadsheet error exists in the "2006 AR" worksheet in USPS-LR-K-115. Exhibit USPS-27B has a minor typographical error which will not change Within County revenue as displayed in the Exhibit.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 14

14. Please refer to USPS-LR-K-67, sheet "15.by shape TY", cells: Q17, Q39, Q43, Q45, Q68, and Q88.
- a. In the formula in each of these cells, in-office direct labor costs are converted to whole dollars by multiplying the original source figure (from sheet "20.In-Office TY", cell I6) by 1,000. It is then added to CAG K in-office carrier cost. The latter amount appears to be in thousands rather than whole dollars because there is no conversion factor embedded in the formula. Should the cell formula be modified to convert the CAG K figure to whole dollars? If not, please explain.
 - b. Please explain why CAG K costs are in the numerator, but not in the denominator?

RESPONSE:

a. No, the cell formulas should be corrected through the elimination of this allocation of TY 2006 CAG K costs altogether. These TY 2006 CAG K, listed in column I of worksheet '20.In-OfficeTY', are fully allocated to the various shape and rate subcategories within each LR-K-67 mail subclass through the allocations implemented in the '2.summary TY' worksheet. Columns F and I in this worksheet correctly allocate all the column I CAG K costs to the in-office overhead and in-office-delivery-prep costs within each shape and rate subclass. There are thus no CAG K costs left to be allocated to the in-office direct labor costs calculated in '15.by shape TY'.

Because the CAG K costs that column Q in '15.by shape TY' erroneously attempts to allocate to in-office direct labor are expressed in thousands of dollars, this allocation ends up distributing virtually no CAG K costs to direct labor. Thus, the elimination of this improper allocation has no material impact on the TY 2006 unit costs listed in the '1.Table 1' worksheet. Of the 63 unit costs in this worksheet, none changed by more than one ten-thousandth of a cent.

RESPONSE OF POSTAL SERVICE WITNESS KELLEY
TO POIR NO. 8, QUESTION 14

b. As the response to part a explains, the CAG K costs should not be in the numerator either. Moreover, eliminating these costs from the numerator has virtually no impact on the TY 2006 unit costs.

RESPONSE OF THE UNITED STATES POSTAL SERVICE
TO POIR NO. 8, QUESTION 15

15. Please provide Billing Determinants for FY 2003 for Parcel Post, Priority, and Express mail.

RESPONSE:

The FY 2003 Billing Determinants for Express Mail, Priority Mail, and Parcel Post are provided in library reference K-144.

RESPONSE OF UNITED STATES POSTAL SERVICE WITNESS PAFFORD
TO PRESIDING OFFICER'S INFORMATION REQUEST No. 8, QUESTION 16

POIR8, Question 16. Please provide the Revenue Pieces and Weight (RPW) report by rate category for quarters 1 and 2 of FY 2005. Include RPW reports by rate category for quarters 1 and 2 of FY 2005 for Parcel Post, Priority [Mail], and Express [M]ail.

RESPONSE:

Attached, please find Fy2005qt1_RPWextractfile.xls and

Fy2005q2_RPWextractfile.xls, Excel files, that provide the rate category detail for quarters 1 and 2 of FY2005, respectively. These data are preliminary. Final quarterly RPW data will be produced after the close of the fiscal year.

RPW SUMMARY REPORT FOOTNOTES

- 1/ Beginning FY 2005, International Commercial Packages (ICP) Express Mail is reported with International Express Mail and ICP Airmail Parcel Post is reported with International Airmail Parcel Post. Prior to FY 2005, ICP mail activity was reported in International Other Mail.
- 2/ Outstanding Money Orders Taken Into Revenue are now reported on a quarterly basis.
- 3/ Not included elsewhere in this report.

- Report totals may not sum due to rounding.

RESPONSE OF POSTAL SERVICE WITNESS TAUFIQUE
TO POIR NO. 8, QUESTION 17

17. Please refer to Witness Taufique's response to VP/USPS-T-28-32 and to the billing determinants shown in LR-K-115, File: USPS-T-28ASpreadsheets, Sheet: S-3 REG Commercial BDs and Sheet: S-7 Comm. Piece-Pound Dist.-BY. In his response, Witness Taufique states that there were 3,162,367 pieces and \$1,798,354 in revenue for Customized Market Mail (CMM) in FY 2004.
- a. Please provide the cell locations for the FY 2004 CMM piece and revenue amounts in sheet: S-3 REG Commercial BDs.
 - b. Please provide the cell locations for the FY 2004 CMM piece volume in sheet: S-7 Comm. Piece-Pound Dist.-BY.
 - c. Please explain how the procedure for calculating Standard Mail TYAR revenues ensures that TYAR CMM pieces are charged both the Basic Nonautomation Nonletter minimum piece rate plus the residual shape surcharge.

RESPONSE:

- a. The CMM volumes are contained in the Basic Nonletters (piece rates), No Destination Entry item in cell H80. Since CMM pieces are RSS pieces, their volumes are also contained lower on the same worksheet in the corresponding volumes of RSS pieces, cell H123. There are no revenues reported on this worksheet, although the CMM volumes contribute to the revenue per piece figures reported in the adjacent cells G80 and G123.
- b. The CMM volumes are contained in the Basic Presorted (Nonautomation) Parcels (Piece Rated Pieces-Origin Entry) item, cell D32.
- c. Cell D32 in Sheet S-7 (referenced in part b, above) includes CMM base year volumes, and feeds into the corresponding cell in Sheet S-21, TYAR Comm. Pcs & Pounds. Volumes in this cell in Sheet S-21 are multiplied by the proposed Nonautomation Nonletter minimum per piece rates, including the residual shape surcharge, to obtain the corresponding component of TYAR revenue reported in Sheet S-23, TYAR Commercial Revenues.
