

Docket No. N2012-1

USPS Library Reference N2012-1/82

Updated Network Rationalization Modeling Nodes

PREFACE

USPS Library Reference N2012-1/82 is a Category 2 library reference relied upon by witnesses Bratta (USPS-ST-1), Smith (USPS-ST-3) and Bradley (USPS-ST-4). It serves as an update to USPS Library Reference N2012-1/34, which was relied upon by witnesses Bratta (USPS-T-5), Smith (USPS-T-9) and Bradley (USPS-T-10).

As with that predecessor library reference, USPS Library Reference N2012-1/82 contains background analysis conducted by or under the direction of witness Rosenberg (USPS-T-3).

Library Reference 34 was based on the original December 5, 2011, list of facility consolidation proposals. Library Reference 82 is compiled on the basis of the facility consolidations announced on February 23, 2012. In addition, some sites are still under study. In these cases, it is assumed that sites being studied for closure will not be active in the proposed network (as was the assumption used in Library Reference 34). These assumptions are pre-decisional and are subject to change.

This library reference has one file in its root folder:

82_Facilities List Final Update.xls

This Excel file has one worksheet, titled Final. This Excel file contains a list of all USPS facilities with indicators for inclusion in the future mail processing network under Network Rationalization, updated to reflect the results of AMP studies as of February 23, 2012.
