

physicist, a health physicist, an authorized nuclear pharmacist, and other physicians that manage patient care. The T&E for the radiopharmaceutical team approach would be performance-based: Licensees would develop policies and procedures to address how their teams would meet the requirements in 10 CFR 35.41 and 10 CFR part 20.

2. Team AUs With Authorized Administrators

Licensees would need both an AU and an authorized administrator (AA) to administer radiopharmaceuticals under 10 CFR 35.300. AAs would be individuals authorized by the licensee to administer radiopharmaceuticals in accordance with the written directive (e.g., a nuclear medicine technologist or a nuclear medicine advanced associate). The T&E for AUs would be performance-based and focus on the licensee's policies and procedures for written directives, reporting medical events, and patient release criteria. Because AAs would be physically administering radiopharmaceuticals, AAs would be required to have training on radiation safety, written directives, preparation and administration protocols (or vendor training, if available), patient release criteria, and medical event reporting.

3. Partner Limited-Trained AUs With Authorized Nuclear Pharmacists

The T&E for AUs would be at least 400 hours, however, the AU would be required to physically partner with an authorized nuclear pharmacist (ANP) for all administrations of radiopharmaceuticals. Unlike the approaches in Sections D.1 and D.2 above, prescriptive T&E would be required for the AU in this approach due to the AU's more prominent role in the administration of radiopharmaceuticals. The minimum of 400 hours of T&E for the physician partnering with an ANP would be focused on supervised work experience and patient cases, and preceptor attestation would be required. The AU would be responsible for administration of radiopharmaceuticals in accordance with the written directive, and the ANP would be responsible for radiation safety-related duties.

- *Question 9:* How should the radiation safety responsibilities be divided between the AU and ANP?

IV. Additional Questions for Consideration

The NRC is requesting input on the following questions as they relate to the draft approaches discussed above.

- *Question 10:* What are the advantages and disadvantages of the draft approaches?
- *Question 11:* Are there significant costs or benefits associated with any of the approaches?
- *Question 12:* Would any of the draft approaches impact patient access to radiopharmaceuticals or address stakeholder concerns of overly burdensome (regulatory) requirements?
- *Question 13:* For the draft approaches that consider tailored hours of T&E, what are the appropriate numbers of hours and what radiation safety topics should comprise the limited T&E?
- *Question 14:* Should the NRC consider inclusion of a formal radiation safety competency assessment and periodic reassessments for any of the draft approaches above? If so, who should establish and administer these assessments?
- *Question 15:* How would the draft approaches impact the medical organizations that use the NRC's T&E requirements as a basis for establishing their training programs?
- *Question 16:* Are there concerns regarding implementation and/or viability for any of the approaches discussed above?
- *Question 17:* Are there any unintended consequences of the draft approaches?
- *Question 18:* Which of the draft approaches best positions the NRC to effectively regulate future radiopharmaceuticals?
- *Question 19:* Should the NRC continue to play a role in the review and approval of AUs?

Dated at Rockville, Maryland, this 29th day of April 2019.
