

the proposed action. The state official concurred with the EA and FONSI.

III. Finding of No Significant Impact

The NRC staff determined that the proposed action complies with the requirements of Subpart E of 10 CFR part 20, "Radiological Criteria for License Termination." Decommissioning of the site to the proposed derived concentration guideline levels will result in reduced residual contamination levels in the

facility, enabling release of the facility for unrestricted use. No significant radiologically contaminated effluents are expected during the decommissioning. Occupational doses to decommissioning workers are expected to be low and well within the limits of 10 CFR part 20. No radiation exposure to any member of the public is expected, and public exposure will therefore also be less than the applicable public exposure limits of 10 CFR part 20.

On the basis of the EA, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined not to prepare an EIS for the proposed action and a FONSI is appropriate.
